Assignment 1 Additional Task

Your goal is to fix the error message created by entering a value that is not recognized by the Scanner class.

As it is right now, the console displays

Exception in thread "main" java.util.**InputMismatchException**
      at java.util.Scanner.throwFor(Unknown Source)
      at java.util.Scanner.next(Unknown Source)
      at java.util.Scanner.nextInt(Unknown Source)
      at java.util.Scanner.nextInt(Unknown Source)
      at PocketCalculator.main(PocketCalculator.java:15)

This is done because the Scanner class throws a **InputMismatchException** which isn't properly "caught".

Your goal for this task is to "catch" the error by using a try-and-catch block. If you follow the link to the tutorial from oracle on the main page, you should be able to figure out how to display a message saying

You did not enter an integer or double. Please try again!

instead of the red error message.

Good luck!
